

Voltz-Guard™ Insulated Tools

The IDEAL insulated tool line creates a perfect blend of safety, comfort and precision functionality. Each tool features double insulated Santoprene® handles with a soft, easy-to-grip outer surface. In addition to the ergonomic qualities found in our tools, the insulated coating process acts as an 'at-a-glance' safety check. If the orange outer coating reveals any of the inner yellow surface, an electrician will know that this tool needs to be replaced.

- Meets OSHA requirements for insulated tools

Insulated Hand Tools

Pliers only

- Warning** Whenever possible, always de-energize lines and equipment prior to working on or around them. 1000V insulated tools are designed only to reduce the chance of injury where the tool may make contact with an energized source. Work around energized circuits should only be done when absolutely necessary and only by qualified technicians. Property damage, personal injury or death may result if the following warnings are not heeded:
- Do not use any insulated tool if the insulation cracks, breaks or becomes damaged in any way. Destroy all dual-layer tools if the inner yellow layer shows through the orange outer layer.
 - Do not touch the uninsulated portion of an insulated tool or any conductive object when either might contact an energized source.
 - Tools must be kept clean and dry for proper insulating properties.
 - Always inspect insulated tools before use.
 - Use additional protection by wearing protective clothing and approved eye protection.
 - Always use tools that are specifically designed for the task.
 - These tools meet UL 22PP, ASTM F1505-01 and IEC 60900 standards for insulated tools.
 - Always follow OSHA 1910 S and NFPA 70E safety requirements when doing electrical work.

- REGULATIONS**
- Testing:**
- Every 1000V insulated tool we sell is individually tested to ensure no failure when subjected to live current.
- UL and VDE Certification:**
- Listed below are some of the tests we perform in order to pass certification:
- Tools are immersed in water for 24 hours, then tested under current for 3 minutes to ensure no current leakage or sparkover occurs.
 - After being stored for 168 hours at -40° C (-40° F), tools are dropped to ensure no damage from impact.
 - After being stored for 168 hours at +70° C (158° F), a tensile load is applied to ensure the grip is firmly bonded to the tool.
 - Tools are subjected to flame for 10 seconds to ensure no flammability of the insulating material.
- OSHA Regulations:**
- OSHA 1910.335(a)(2)(i) When working near exposed energized conductors or circuit parts, each employee shall use insulated tools or handling equipment if the tools or handling equipment might make contact with such conductors or parts.
- OSHA 1910.335 (a)(1)(i) Employees working in areas where there are potential electrical hazards shall be provided with, and shall use, electrical protective equipment that is appropriate for the specific parts of the body to be protected and for the work to be performed.
- Make sure you are in compliance by providing and using IDEAL insulated tools!**
